

Smulders is an international steel construction company with more than 1,400 employees working across offices in Belgium, the Netherlands, Poland and the United Kingdom. We have a proven track record in the engineering, construction, supply and assembly of heavy, technical complex and architectonic steel constructions. We are active in Civil & Industry and Offshore Wind market.

Throughout the past decades our main goal has always been "to make our client's wishes reality". Combining our passion for steel with our extensive expertise enables us to bring unique products to the market.

We create our products with utmost care and a keen eye for quality in constant proactive interaction with our clients. We stand out in terms of know-how and technical skills, but most of all because of our drive to fulfil the promises we make to our clients. That is why our reference projects are working at full speed all over the world. Simply because they were realised with a true passion for steel.

Smulders is proud to be part of Poland's first offshore wind farm, Baltic Power. We will be supplying 76 transition pieces, marking a major milestone in clean energy in Poland. Congratulations to Orlen and Northland Power for reaching financial close!

We are thrilled that our production facilities in Poland, which have supported offshore wind projects across Europe for the past two decades, can now contribute to a project in their home country.

During Smulders' more than 10-year presence in Poland, we managed to implement some of the largest projects in the European, Asian and American seas.

Thanks to this, we are proud to have celebrated over 2,000 thousand TP.

Cooperation between Polish and Belgian companies consists primarily in the exchange of know-how, technology, production and skills.

It is a daily routine, never the less there are many actions that contact Polish and Belgian colleagues are strengthened by many ecological and team-building actions.

Smulders employees have been exercising for charity, raising a whopping €10,000 for the Polish Red Cross. Early April, we launched the Smulders Sports for Charity app. By entering their favourite sports activities in the app, our colleagues collected points, and together they completed the 10,000 km (virtual) course along all Smulders branches. Swimming, cycling, power training, horse riding... Our colleagues gave it their best in the last 3 months! Their efforts were rewarded as we reached the finish line last weekend. As a result, Smulders will donate €10,000 to the Polish Red Cross.

Finally Smulders are already 55% less CO2! 🌍

Our ultimate goal is to become completely CO2 neutral by 2035. Every year we evaluate how we can reduce CO2 emissions even further to achieve this goal.

Our mission "Passionately creating complex steel structures by embracing unique expertise and innovation." Our mission statement is focused on innovation, to which we have been truly committed in recent years in several areas of our business. This focus on innovation can partly be attributed to sustainability. Just think of renewable energy sources, energy-saving measures, research into future low-carbon or even carbon-neutral alternatives, etcetera. Our aim is to be fully CO2 neutral by 2035. By the end of 2023, we will draw up a carbon-neutral plan for each site, which will specify the actions to be taken to achieve this objective. You will find more about this in the chapter on the CO2 Performance Ladder.
